Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a Thin Film Transistor array panel, classified in class 257, subclass 292.
- II. Claims 6-9, drawn to a mask, classified in class 430, subclass 5.
- III. Claims 10-23, drawn to a method of making a TFT array panel, classified in class 430, subclass 311.

The inventions are distinct, each from the other because:

Inventions I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process could be used to make a materially different product such as a substrate that is intended to be used with a longer wavelength.

Inventions II and I, III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the

instant case the product could be used in a materially different method such as one for forming fine lines in a amorphous silicon layer by laser heating.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
